One Month Later, Windows 7 Very Popular

Huntsville, AL (11/30/09) – On October 22nd Microsoft launched its Windows 7 Operating System, with all the fanfare and media attention it deserved. Many IT professionals however remember when Windows 7's predecessor, Vista, launched with similar fanfare and positive reviews but quickly became unpopular with users and technicians alike. How has Windows 7 held up in its first month of real world usage? Computer Troubleshooters (the world's largest IT support franchise with almost 500 locations globally) surveyed its franchise network in late November to find out.

The results of the global survey bode well for anyone who will be receiving a new Windows 7 computer this Christmas. Almost three-quarters of the Computer Troubleshooters surveyed indicated that they are running Windows 7 on their own personal computer(s). More than half (55%) have already installed Windows 7 on their customer's computers, and a whopping 93% say that Windows 7 is a reliable alternative to Windows Vista or XP.

But when the question of whether or not upgrading comes up, the data is more mixed. 48% recommend clients running Windows Vista upgrade to Windows 7 "immediately" while 45% recommend upgrading but not right away – following the traditional IT viewpoint that major upgrades should be in use for a few months before being considered for mainstream use. For customers running Windows XP the data is less enthusiastic – only 14% recommend an immediate upgrade, with almost 57% recommending upgrading "eventually" and almost 28% recommending sticking with XP. This indicates plenty of ongoing affection for the 8+ year old Windows XP operating system. Similarly when asked which OS is faster – in their experience – fully 84% of the Computer Troubleshooters chose Windows 7 over Vista, but only 36% say Windows 7 is faster than XP, with another 40% saying it's "too close to call".

When asked to choose their personal favorite OS, Windows 7 is the clear favorite with 54% of respondents. Windows XP followed with 37%, and then Mac OSX came in a distant third with 3.7% of the votes. Windows Vista came in last with 1.8% of the vote (about 2% chose "other", showing just how unpopular Vista has been with the IT community).

Another question on the survey asked what "must haves" a customer's computer needs before the Computer Troubleshooter would consider it for an upgrade to Windows 7. The most popular answers were related to the processor (dual-core

recommended), followed by the graphics card (Aero-capable, prefer dedicated not shared), and memory (most recommend 2GB, though many said 1GB was sufficient).

“Overall the survey reflected what we have been hearing anecdotally” said Chip Reaves, CEO of Computer Troubleshooters Global. “[Windows] Seven is popular with the Computer Troubleshooters network, and seems to be equally popular with the IT community in general. It’s not perfect – no OS is – but with the first month under our belts now we’re very happy with the new Windows.”

Survey Results:

Q1: Since Windows 7 officially launched, have you installed it on your own computer(s)?

YES: 74.8%, NO: 23.2%, No Response 1.8%

Q2: Since Windows 7 officially launched, have you installed it on a customer’s computer?

YES: 54.8%, NO: 44.6%, No Response <1%

Q3: In your professional opinion, does Windows 7 seem to be a reliable alternative to Windows Vista or XP?

YES: 93%, NO: 5.5%, No Response 1.3%

Q4: For your customers currently running Windows Vista, do you recommend upgrading to Windows 7?

Yes, Immediately: 48.3%

Yes, but not right now: 45.1%

No: 6.5%

Q5: For your customers currently running Windows XP, do you recommend upgrading to Windows 7?

Yes, Immediately: 13.9%

Yes, but not right now: 56.7%

No: 27.9%

Q6: Based on your experience, is Windows 7 faster than Windows XP?

Yes: 84.1%

No: 1.3%

Too Close To Call: 11.1%

No Response: 3.2%

Q7: Based on your experience, is Windows 7 faster than Windows Vista?

Yes: 36.2%

No: 22.3%

Too Close To Call: 39.5%

No Response: 1.8%

Q8: Which OS do you personally prefer?

Windows XP: 37.2%

Windows Vista: 1.8%

Windows 7: 53.9%

Mac OSX: 3.7%

Other: 2.3%

No Response: <1%

Q12: Has Understanding Microsoft's licensing programs been an issue for your customers?

Yes: 63.2%

No: 35.3%

No Response: 1.3%

About Computer Troubleshooters

Computer Troubleshooters is the largest international network of franchise owners providing onsite computer services to small businesses. Now in its 12th year of service, Computer Troubleshooters has more than 475 franchises worldwide in more than 26 countries.

The company provides a comprehensive range of computer and technology solutions to small business owners (typically with 1 to 25 staff). Computer Troubleshooters helps companies with technology issues, problem prevention, virus and spyware remediation, website development and a wide variety of small business IT needs. The company offers the world's only "No-Downtime-Guarantee" on its top managed services plan. The individual franchisees of the company are fully trained at pinpointing and solving a broad range of computer and technology problems.
