

Freedom Signs on as Atlassian Partner

May 5, 2009, Huntsville, AL -- Freedom Information Systems, a Huntsville-based data architecture firm, has become an official partner of online collaboration and development software company, Atlassian.

The Freedom Information Management teams have worked together on several projects using Atlassian's Confluence Wiki software, a collaborative interface that boosts productivity for Freedom's federal clients. With the additional advantage of being an Atlassian Partner, Freedom can now extend the functionality of the Wikis it manages by providing plugins and technical services.

"By becoming an Atlassian Partner, we have better positioned ourselves to support the expanding collaborative efforts currently underway with our clients," said Barry Britnell, Freedom's Director of Information Technology, "We recognize that when we develop plug-ins oriented toward our clients' specific processes, we can gain even more value from collaborative tools."

The Atlassian partner community shares technical innovations and improves local support to client users, including academia, Fortune 1000, and science and technology sectors, who have needs that go beyond the off-the-shelf package.

"When Atlassian called to talk about becoming a partner, I knew that Freedom was the perfect candidate," said Britnell, "Freedom's innovation is exactly what makes it a successful business."

Freedom Information Systems, Inc. is a woman-owned, small business with offices in Alexandria, VA and Huntsville, AL with a technical staff located at federal facilities in Alabama, Ohio, Virginia and the District of Columbia. Freedom provides information management and business intelligence support for program and project managers in federal agencies such as the National Aeronautics and Space Administration (NASA).
