Inergi Shipping Wonderworks Exhibits to New Panama City Location

Attractions utilize interactive technology to engage young visitors

HUNTSVILLE, Ala., May 28, 2010 – You really couldn't blame Inergi's Museum division employees if they took a few minutes this week to walk a tight rope across the Grand Canyon, shoot hoops in front of a sell-out crowd or land the space shuttle. Those adventures, and more, are part of 35 exhibits being built by Inergi for the new Wonderworks museum opening this summer in Panama City, FL.

Huntsville-based Inergi, a leading provider of museum exhibits and other engineering and design services, was selected by Wonderworks in 2009 to outfit the new facility. The first shipment of exhibits will be heading down I-65 to the coast later this week.

"Wonderworks has an excellent philosophy," said Joel Sowder, director of Inergi's Museum Division. "It provides entertainment in a unique, educational atmosphere. Children have a great time, but they come away learning valuable lessons about math, science and more. We are honored that Wonderworks entrusted Inergi with this project."

The exhibits constructed by Inergi include simulators that will let kids land the space shuttle, navigate the surface of Mars and experience conditions on, and around, the sinking Titanic. Other displays will feature an interactive television trivia challenge, and tests of strength and balance.

(cont.)

Above, Maggie Da Luz tries the "One in a Million" exhibit. "One in a Million" educates kids on the mathematics behind probability and chance by challenging them to find a solitary yellow bead hidden among 999,999 other black beads.

A simulated Mercury Capsule, left, gives Wonderworks visitors like Baylee Collum a chance to see what it was like as an astronaut during the early years of space exploration.

Inergi used interactive chroma key video technology to build two of the attractions. *Tightrope Adventure* will let kids walk a simulated tightrope in front of a variety of virtual terrains and settings, while *Inside the Game* will let them shoot basketball in various arenas across the country. *Time Machine* will let kids enter their email address to automatically receive a digital photograph of their trip five years into the future and *Plastex Surgery* will let them use a touch screen monitor to digitally alter and print an image of their face.

The Panama City attraction will join current Wonderworks locations in Pigeon Forge, TN and Orlando, FL. A fourth Wonderworks museum is slated to open in Myrtle Beach, SC next spring.

About Inergi

Born out of the rich heritage of Huntsville's high-tech environment, Inergi (www.inergi.com) has taken its place as a leading provider of advanced prototype engineering, low-rate production, tradeshow exhibits & services, museum exhibits, large format printing and marketing communications support. Housed in the historic 1920s-era Martin Industries Building, Inergi's team of engineers, designers and support personnel are committed to providing clients with life cycle support from initial concept to fulfillment. Inergi's diverse client base includes strategic partnerships with commercial, industrial and governmental clients. Inergi is a member of the Davis Lee family of companies, which serve the energy, insurance, food processing, and import/export industries, as well as the Liberty's Legacy initiative that supports educating the next generation on the value of liberty through replicas of the Statue of Liberty.
